

**FOOTBAR**

# MOBILE DEVELOPER

*JOB DESCRIPTION*

# FOOTBAR UNIVERSE

## Our vision

By joining the Footbar team, you will contribute to taking traditional soccer into a new dimension. We aim at creating an innovative and unique soccer experience, halfway between e-sports and traditional practice.

We work hard every day to make the Footbar experience an addictive and gamified one in order to create a community of Footbar users. By 2025, our goal is to have over 1 million users in this community.

## Our history

Created in 2014 thanks to the collaboration of two engineers, Footbar develops and markets the METEOR, a leg mounted wearable device allowing, thanks to an artificial intelligence, to collect all the statistics related to the performance of soccer players (distance covered, number of shots...).

Initially offered in several 5-a-side soccer centers in France, the Meteor has aroused a strong interest encouraging us to also establish ourselves on a B2C market that is expanding in several different countries.

Today, we are proud to have collaborated with major players in the soccer sector such as Manchester City, the KNVB, the Luxembourg national team and many others. Footbar is currently experiencing a period of high demand and many other projects are underway.

## Our products

Footbar currently offers two main services based on the data collected by METEOR:

- The use of the Footbar application, an application that allows everyone to obtain their statistics after each performance and to access a range of social, fun and addictive features
- The use of the Coach platform, allowing coaches to compare the data of their players and monitor their form in order to establish strategic choices.

# YOUR POSITION

## Description

*Mobile Developers at Footbar build the core of the user experience!*

In charge of the development of our mobile applications, you'll bring to life the features and design worked out with the product team. You will contribute to the development of new features on our native iOS and Android applications, but also to the correction of bugs and the improvement of the quality of our code.

## Your Role

- Design, develop and maintain native Android and/or iOS applications.
- Reproduce and correct bugs reported by users.
- Actively participate in iterations on the product roadmap and development method in collaboration with the entire product team.

## The context

- You will be part of a small technical team ~5 people with complementary skills (data, embedded, web, design...).
- Your opinion counts and you participate fully in the definition of the content of each sprint.
- Your work has a direct impact on the daily life of the customers, collecting their feedback is a priority.
- We use the best technologies, and the most adapted to each task. Our mobile applications are currently developed in Java and Swift.

## Profile required

We accept juniors, but the presentation of concrete achievements (personal, student, internship) is mandatory.

# YOUR POSITION

## Skills

- You have already worked with an object-oriented language and are comfortable with the main programming concepts.
- You are comfortable with collaborative IT tools (git, bug tracking, documentation).
- Mastery of development environments such as Android Studio or XCode is a plus.

## Personality

- You are sensitive to the quality of the user experience.
- You don't wait for someone to give you the solution to your problem, you create it!
- You like to work in a team and discuss the product architecture.
- You are methodical and always try to prove your intuitions with objective measurements.

# CONTACT US

You are passionate about soccer, you have experience in mobile application development and you know how to work in a team.

Then you might be the one we need!

If you think you're the right person for the job, send us your resume and a cover letter describing the projects you've worked on, what you've learned from your experiences, and what you want to learn at Footbar
